Divine Proportion / Golden Ratio

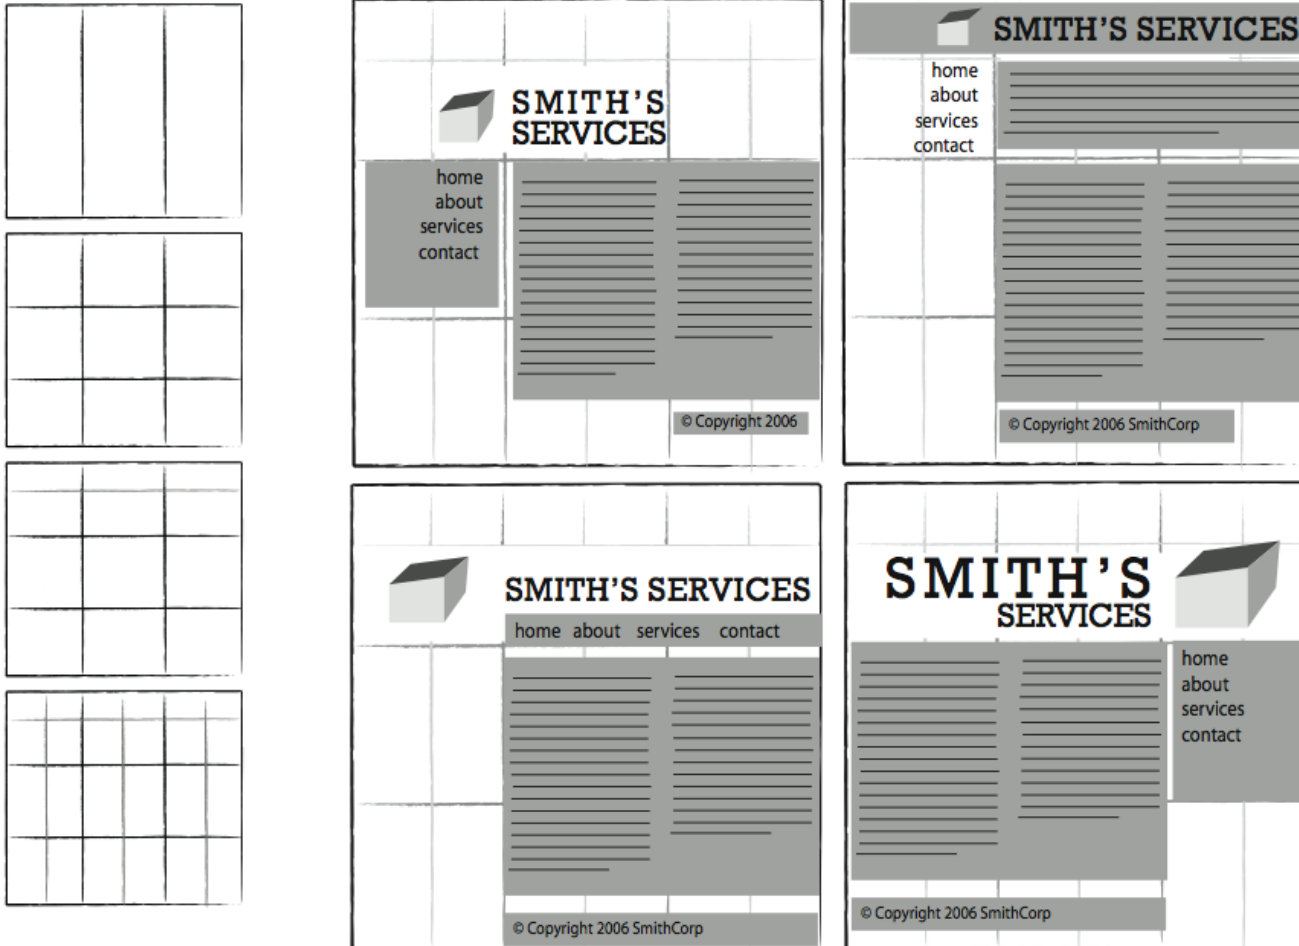

The Golden Rectangle

Rule of Third

- Simplified version of golden rule

Balance

- Symmetrical Balance

- Asymmetrical Balance

Unity

Design theory describes unity as referring to the way in which the different elements of a composition interact with one another.

- Proximity
- Repetition

Proximity

Proximity is an obvious, but often overlooked way to make a group of objects feel like a single unit.

Proximity (White Space)

Don't Fear White Space

The screenshot displays the w3avenue website, which features a dark green header with navigation links: HOME, ARTICLES, COMPONENTS, DESIGN, LIBRARIES/Frameworks, SITES, SOCIAL WEB, SOFTWARE, and TOOLS. The w3avenue logo, with the tagline "advice & resources for rapid web development", is on the left, and a search bar is on the right.

The main article is titled "MopSlider jQuery Plugin" and is dated January 7th, 2010, by the W3Avenue Team. The article text describes MopSlider as a jQuery plugin for creating sliders and lists its features, including the ability to place multiple sliders on a page and customize their look and behavior. A "Continue Reading" button is located at the bottom of the article.

On the right side of the page, there is a "Stay Updated, Subscribe to RSS Feed" section with a link to <http://feeds2.feedburner.com/w3avenue>. Below this is a "SPONSORS" section featuring several advertisements, including StudioPress, Thesis, WordPress Forms, and P2H.COM.

Repetition

Any time you bring a set of like items together, they form a group. In the same way, repetition of colors, shapes, textures, or similar objects.

Repetition sample

Emphasis

Emphasis

Closely related to the idea of unity is the concept of emphasis or dominance. Rather than focusing on getting the various elements of a design to fit together, emphasis is about making a particular element draw the viewer's attention.

- Placement
- Continuance
- Isolation
- Contrast
- Proportion

Placement

Although the constraints of practical web design do not often allow for it, the direct center of a composition is the point at which users look first, and is always the strongest location for producing emphasis.

Continuance

The idea behind continuance is that when our eyes start moving in one direction, they tend to continue along that path until a more dominant feature comes along.

Isolation

In the same way that proximity helps us create unity in a design, isolation promotes emphasis.

Contrast

Contrast is defined as the juxtaposition of dissimilar graphic elements, and is the most common method used to create emphasis in a layout.

Proportion

One interesting way of creating emphasis in a composition is through the use of proportion. Proportion is a principle of design that has to do with differences in the scale of objects.

Color

Color & Texture

The Psychology of Color

- Color psychology is a field of study that's devoted to analyzing the emotional and behavioral effects produced by colors and color combinations.
- Ecommerce web site owners?
- Home Design web site owners?
- Fast Food Restaurant owners?

Red

- The color red has a reputation for stimulating adrenaline and blood pressure. Along with those physiological effects, red is also known to increase human metabolism. It is an exciting, dramatic, and rich color; after all, red is also a color of passion.

Orange

- Orange is thought to promote happiness and represents sunshine, enthusiasm, and creativity.
- Also stimulates metabolism and appetite.

Yellow

- Yellow is a highly active and visible color.
- Used for taxicabs and caution signs.
- Associated with happiness and energy.

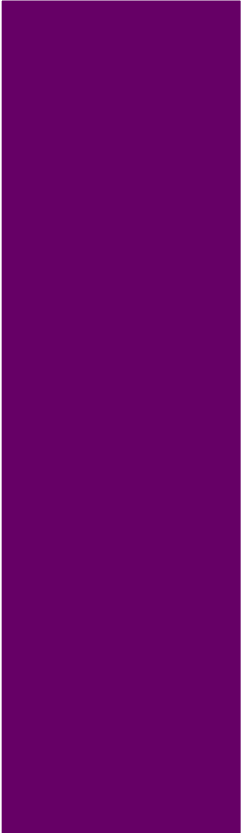

Green

- Green is associated with nature.
- Very soothing color that symbolizes growth, freshness, and hope.
- Much easier on the eyes, and far less active, than yellow, orange, or red.
- Although many web site designs that use green appeal to visitors' sense of nature, green is a very versatile color. When bright green is set against a black background, it really pops, and gives the design a techy feel.

- Blue symbolizes openness, intelligence, and faith.
- Physiologically, blue has been found to calm people down, but it can also reduce appetite. This effect is probably due in part to the rarity of blue in real food. (Aside from blueberries)
- Have you ever noticed that blue is the primary color in the logos of IBM, Dell, HP, and Microsoft? The reason for this is that blue also conveys a sense of stability and clarity of purpose.

Purple

- 
- Historically, the color purple has been associated with royalty and power. (Has to do with the difficulty of producing the dye needed to create purple garments.)
 - Purple is most often connected with flowers, gemstones, and sunsets.
 - According to CSS Zen Garden's Design category index, purple is by far the least commonly used color.

White

- ↗ Perfection, light, and purity.
- ↗ This is why crisp white sheets are used in detergent commercials and why a bride wears a white dress on her wedding day.

Black

- Often has negative connotations such as death and evil.
- Can also be a color of power, elegance, and strength, depending on how it's used

Conclusion

- No wrong color to use.
- Key: Harmony that exists between all the colors chosen.
- To achieve this harmony, we'll need to keep a few other attributes of color in mind.

Color Temperature

Red, Yellow, Orange, Pink, Brown & Burgundy → Sun, Fire, Heat, Motion

Calm People Down, Reduce Tension ← Green, Blue, Violet, Cyan

Color Value

- If you wanted to accentuate the lightness of the good guys, you'd start off either with a pure color, such as blue, or a lighter tint of another cool color.
- The bad guys on our opposing team all look good in black, or use a dark shade of a warm color.

Saturation

- The saturation or intensity of a color is described as the brightness or dullness of that color.

Color Theory 101

↗ RGB (additive)

↗ CMYK (subtractive)

Color Scheme

- Monochromatic
- Analogous
- Complementary

- Tetradic

Monochromatic

Monochromatic (2)

Monochromatic ~ Achromatic

Analogous

Figure 2.19: An analogous monkey

Analogous (2)

Complementary

Complementary (2)

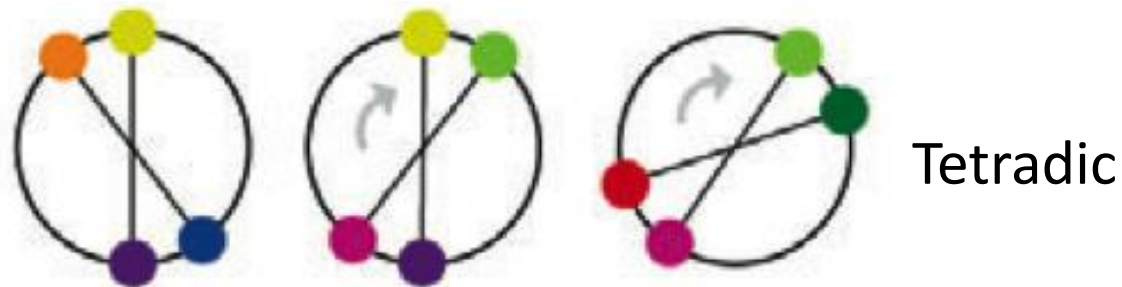

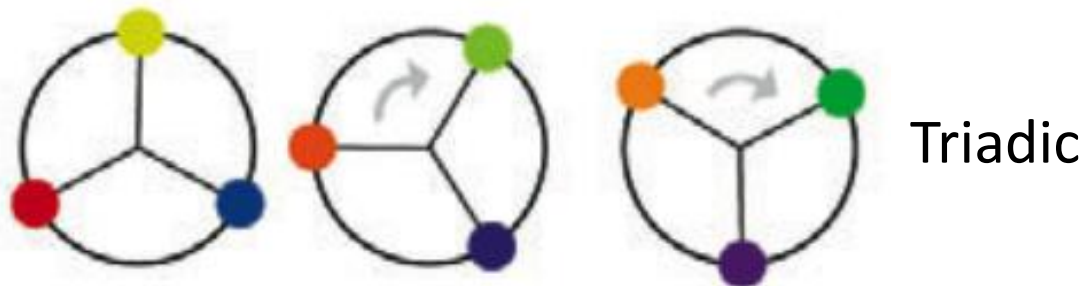

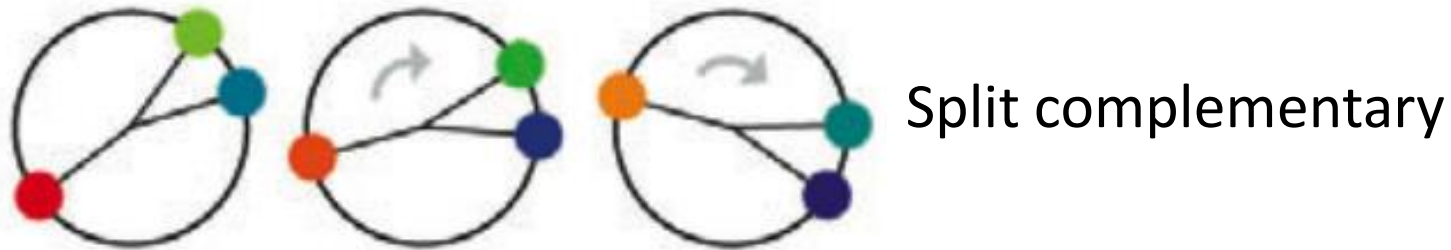

Complementary Pitfalls

- ↗ Good for Emphasis, but horribly painful when used as foreground – background relationship.

A blue square containing orange text. The text is written in a bold, italicized, sans-serif font. It is arranged in three lines: 'MY EYES,', 'OH MY,', and 'THEY BURN!'. The text is centered within the square.

***MY EYES,
OH MY,
THEY BURN!***

Split-complementary, Triadic and Tetradic Color Schemes

Texture

Texture

- Texture is anything that gives a distinctive appearance or feel to the surface of a design or object.
- When you put your hands on a brick wall, a wood beam, or a wet bar of soap, what do you feel?
- Does the texture incorporate repeated patterns? Does it have a unique shape? What are the lines like that make up the shape? Does the shape have volume?

Elements of Graphic Design

↗ Texture can be made from:

↗ Points

↗ Line

↗ Shape

↗ Volume & Depth

↗ Pattern

- One pixel (pixel is short for “picture element”) is one of the hundreds of thousands of dots on your computer screen. If your resolution is set to 1024×768 pixels, you have 786,432 pixels on your screen, arranged in 768 rows and 1,024 columns.

- When two or more points are connected, they form a line.
- The most common element of graphic design, and is among the most expressive

horizontal

Go, naw farm grandma rent city-slickers saw
right it soap snakeoil fishin'. Plumb y'all ain't
last tools no. Moonshine rattler dirty in maw
broke barrel, salesmen coonskin them.
Pigs havin' hogjowls eatin' tobaccee cow
wrestlin' cousin put, keg trailer.

diagonal

Hauled broke hardware feud fishin' huntin'.
Maw liar watchin' drunk grandpa, frontporch
weren't them beat. Woman hollarin', how
firewood butt spell wuz huntin'. Far had
cipherin' rattler muster chew old where
creosote consarn. Feathered ever crop.

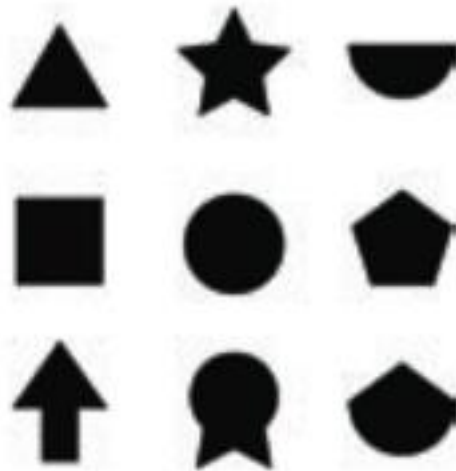

Line (2)

- Varying the thickness and direction of a line can generate a sense of expression and character.
- Jagged lines with sharp angles can feel dangerous and frantic.
- Gently rolling, curvy lines tend to feel relaxing and smooth.
- 90 degrees angles tend to feel sharp and mechanical.
- Lines with lots of curves and angles feel very expressive—like handwriting, graffiti, and sketches.
- not just useful as dividers, borders, and stripes. They're the foundation of art, drawing, and design.

Shape

- Any time the two endpoints of a line come together, a shape is created.

Basic Shape

Freeform Shape

Shape (2)

- Many people seem to forget that freeform shapes exist.
- Unlike print design, which gives us the freedom to draw whichever layout shapes we like, the Web limits us to rectangles.
- Use background images.
- Boxes with rounded-off corners soften the layout, creating more organic, smooth feel.

Volume & Depth - Perspective

Volume & Depth - Proportion

Volume & Depth – Light & Shadow

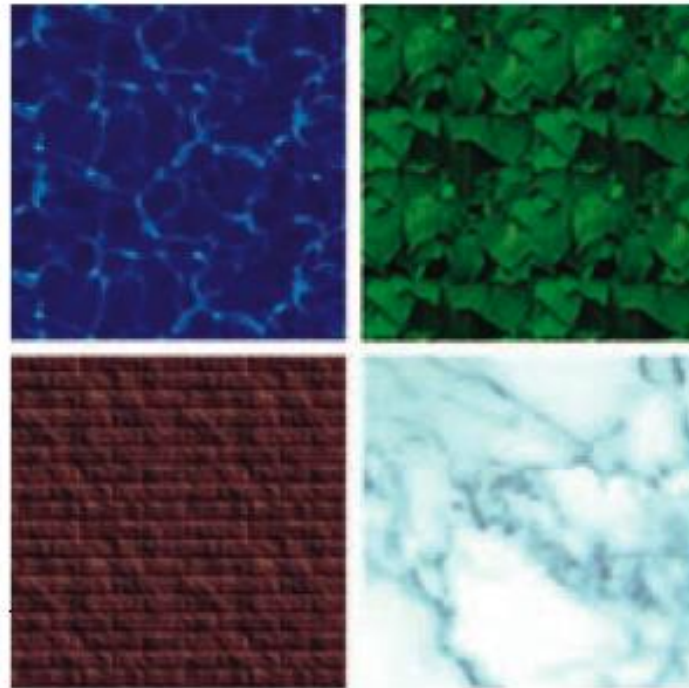

Volume & Depth

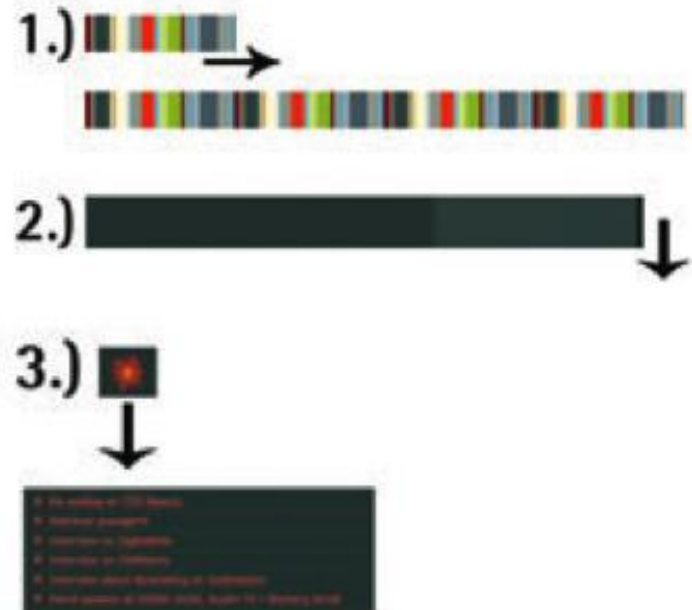

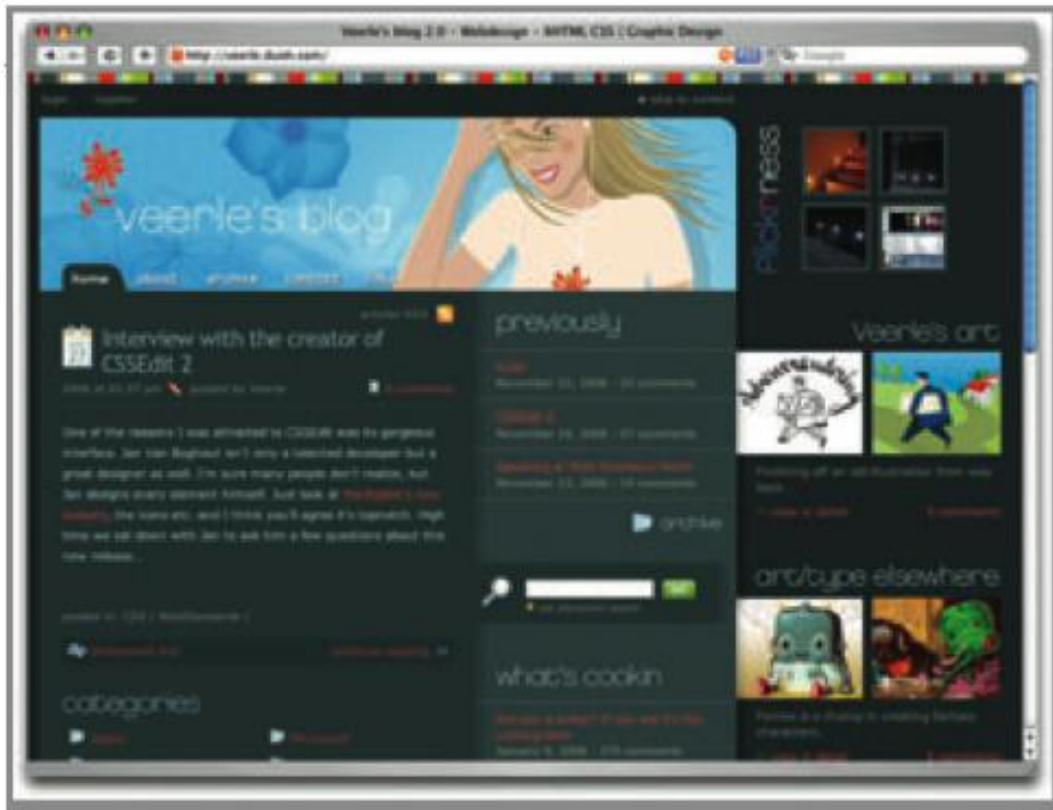

Pattern

- Use pattern to fill layout.
- Reduce the image size as small as possible.

Pattern (2)

Building Texture

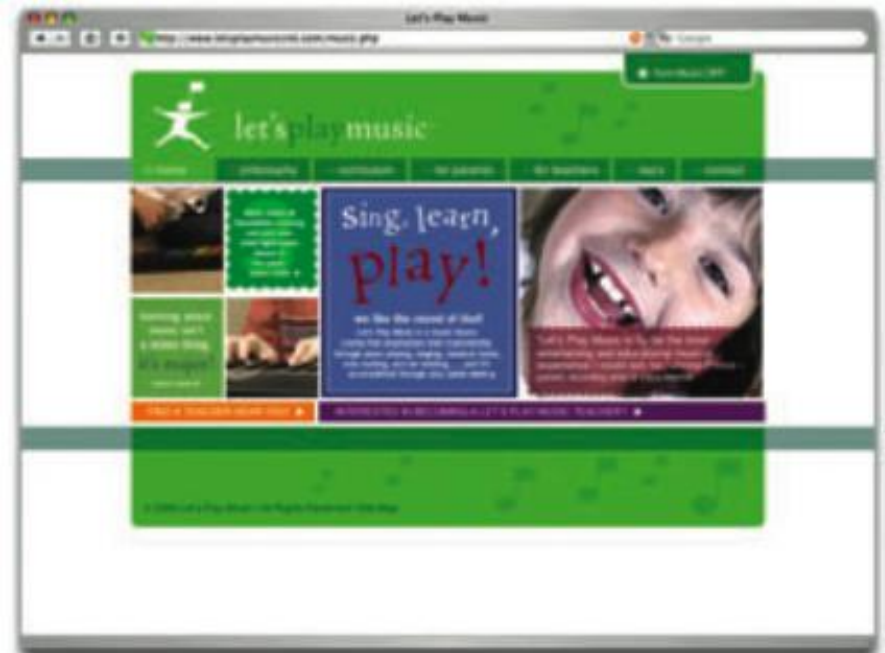

- Point, line, shape, depth and volume, and pattern. Individually, each of these components creates some level of texture.
- However, when you begin to use them together, they build on one another to create much more complex visual imagery.
